Well Registration is the process of collecting well information for groundwater management analysis purposes. The Mid-Kaweah Groundwater Sustainability Agency (MKGSA) would like to have this information to know where and what groundwater aquifer water is being pulled from. The data collected on wells allows the Kaweah technical teams and Advisory Committee to better understand the groundwater system below our feet. This allows MKGSA to tailor projects and management actions to best manage groundwater in a way that avoids undesirable results and State intervention. Without this information, the Kaweah Subbasin is forced to make educated guesses and remain more conservative with our groundwater management decisions.
